Why Use Strip Doors?

Our *SAVE-T*® Strip Doors are the most economical solutions to protect employees and goods from adverse environmental conditions such as noise, heat, cold, humidity, dust and drafts.

In order to meet the demanding requirements of today's industrial and commercial marketplaces, our inventory of *SAVE-T*® Products is constantly being updated. We offer the most diversified range of PVC products and strip door hardware in the USA. Our sales staff and design engineers can handle your everyday needs or your most troublesome problems.

BENEFITS

- Reduces Hot or Cold Air Loss
- Restricts Movement of Air Pollutants
- Transparency Promotes Safety
- Provides Bird and Flying Insect Control
- Isolates Noisy Machinery
- Increases Employee Comfort
- Easy to Install
- Strong and Durable
- Minimizes Maintenance

Industrial Strip Doors

Industrial Strip Doors are used any time an opening is greater than 6 feet wide and 8 feet high. Built to withstand heavy industrial fork truck traffic, industrial strip doors are offered in a variety of materials based on the application; clear, frosted, black, weld screen, offset double-ribbed and anti-static for use in clean rooms. TMI Strip Doors are inexpensive, easy to install and can save hundreds of dollars in energy costs every year.

Features

- Studded or *SAVE-T* LOC® mounting hardware available
- Choice of 4", 6", 8", 12" or 16" strips
- Choice of wall, header or universal mounting hardware
- Broadest variety of PVC materials

Benefits

- Reduces Air Loss
- Increases Employee Comfort
- Noise Reduction
- Strong and Durable
- Stops Bird and Flying insects
- Promotes Safety

Accordion Strip Doors Standard & Motorized

TMI's Accordion Strip Door design is unique in the industry because it rotates the door strips and stacks them flat when open, requiring very little space compared to sliding tracks. A door can be pulled to one side or parted in the middle to allow free passage during high traffic times or for sensitive cargo to pass.

Motorized Accordion Strip Doors automatically open as quickly as 36" per second and are available for door sizes up to 11' W and 10' H for one-sided or up to 22' W and 10' H for bi-parting, with a minimum door height of 104". *Doors greater than 11' wide are always bi-parting.*

Features

- Open to one side or bi-parting
- Wall, in-jamb and overhead mount
- Bi-parting models can fit openings up to 28' wide x 10' high
- Optional motorized door ensures steady workflow

Benefits

- Easy Pass Through
- Maintains Temperature
- Controls Dust
- Reduces Strip Wear
- Lasts Longer

Sliding Strip Doors

Sliding Strip Doors take advantage of available wall space on one or both sides of a doorway to allow the strip door to be slid out of the way during heavy traffic or to protect passing inventory.

Features

- Strong and durable
- Choice of 3 mounting methods:
 1. Wall mount opening to one side (OSWM)
 2. Bi-parting wall mount (BPWM)
 3. Double track-header mount (BPHM)

Benefits

- Saves Energy
- Maintains Temperature
- Isolated Contaminants
- Slides Open for Heavy Traffic

Truck Strip Doors

Truck Strip Doors help to keep refrigerated trailer temperatures stable while the truck door is open during deliveries, with the added benefits of preventing flying insects from entering. Additional brackets can be placed at different depths so the strip door can be moved.

Features

- Quick and easy installation using our exclusive ComPress Rod and Double-U Mounting Brackets
- Standard Clear or Low-Temp Strips
- Available in 6" or 8" wide strips

Benefits

- Saves Energy
- Maintains Proper Temperature
- Blocks Flying Pests
- Enhances Security and Privacy

Personnel Strip Door

Interior Applications Only

Personnel Strip Doors separate temperatures between rooms to ensure the comfort of employees and customers alike. They provide a cost-effective solution to streamline workflow in restaurants and other areas with high personnel traffic. A strip door for personnel can pay for itself in as little as 3 months due to increased savings on energy bills. *For Doorway Openings 34" to 40" wide, up to 96" high*

Features

- Strips are available in standard clear PVC strips, 8" wide and .040" thick
- 6 pack replacement strips available
- Mounting Hardware is 100% NSF Certified non-corrosive, high-impact polypropylene

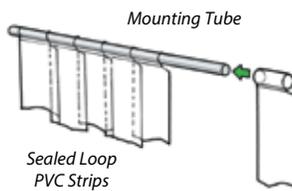

Benefits

- Installs in Only 10 Minutes
- Blocks Dirt, Dust and Grease
- Maintains Visibility and Light
- Reduces Sound Transmission

M-Series Strip Door

M-Series strips have a heat-sealed loop at the top which slides onto a mounting bar. This design alleviates stress at the point of contact with traffic. It also allows the strips to be rotated or replaced easily. Available in 6" and 8" widths in standard and USDA Low Temp. Mounting hardware and brackets are all aluminum.

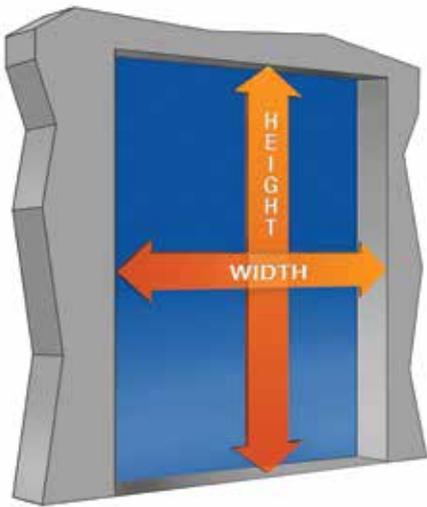

| Model | Size | Material | Temp. (°F) |
|---------------|------------|--------------------------|-------------|
| M-106-PR-4080 | 6" x .060" | USDA Low Temp Reinforced | - 20 to 150 |
| M-108-PR-4080 | 8" x .080" | USDA Low Temp Reinforced | - 20 to 150 |
| M-106-S-4080 | 6" x .060" | Standard | 0 to 150 |
| M-108-S-4080 | 8" x .080" | Standard | 0 to 150 |

M-Series Doors are 40" W x 80" T to fit openings up to 36" W x 72" T

Requirements for *SAVE-T*® Strip Doors

TMI Strip Doors are designed based on several factors, including door width & height, interior or exterior use, kind of traffic and environmental conditions. Different sizes of strip material are available in six different overlap patterns (see charts below). TMI recommends a minimum strip overlap for interior doors and a maximum overlap for external. For heavy-duty traffic applications, TMI recommends using offset double ribbed material for additional scuff resistance and longer service life.

Calculating Strip Door Layout

STEP 1

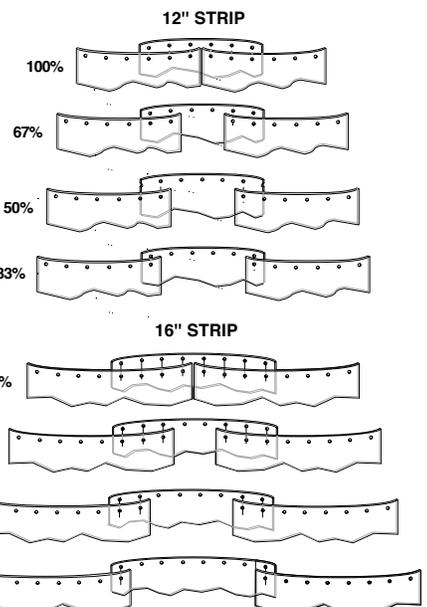

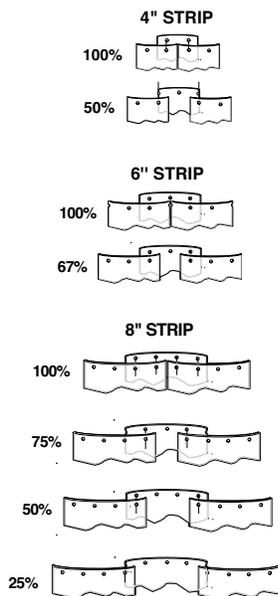

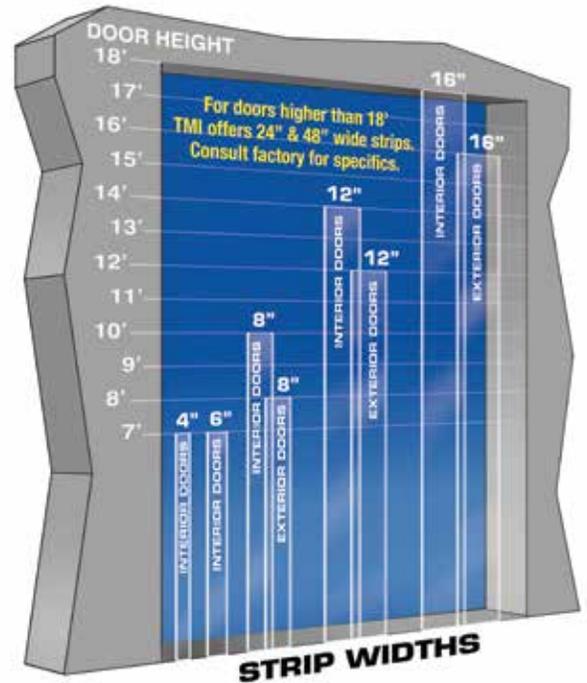

Measure the width and height of the doorway opening. Round up to the next full foot.

STEP 2

Use the appropriate strip width based on opening height. Consider whether the door will be an interior or exterior door.

STEP 3

Determine which overlap percentage is requires. Use the maximum percentage for exterior doors due to the possibility of high-velocity wind gusts. For heavy duty traffic applications, increase strip size or use offset double-ribbed strips.

STEP 4

Find your Multiplying Factor using the chart below.

| | | Multiplying Factor in Red | | | | | |
|--------------|--|---------------------------|-----|------|-----|-----|------|
| | | Overlap % | | | | | |
| Strip Widths | | 25% | 33% | 50% | 67% | 75% | 100% |
| 4" | | | | 4 | | | 6 |
| 6" | | | 2 | | 3 | | 4 |
| 8" | | 1.75 | | 2 | | 2.5 | 3 |
| 12" | | | 1.2 | 1.35 | 1.5 | | 2 |
| 16" | | .875 | | 1 | | 1.2 | 1.5 |

Note: After calculating the number of strips, add 1 strip so door edge is not exposed.

STEP 5

Multiply the Door Width by the Multiplying Factor. The result is the number of Strips needed. Add 1 strip to that figure to compensate for edge exposure. Finally, multiply that number by the Doorway Height. The result is the linear footage required.

Example: For a door that is 10' Wide by 12' High using 12" Strips with a 67% Overlap.

| Multiplying Factor | Door Width in Feet | Number of Strips | Add 1 Strip | Total Number of Strips | Door Height in Feet | Linear Footage of PVC Strip |
|--------------------|--------------------|------------------|-------------|------------------------|---------------------|-----------------------------|
| 1.5 | x 10 | = 15 | + 1 | = 16 | x 12 | = 192 |

Example of Model Number

Doorway Opening: 10' W x 10' H
Standard Traffic

Model SD 12-67-UL

Strip Door 12" x .120" Standard PVC
67% Overlap (See this page)
Standard Header Mount (See page 23)

Model SD 12-67-UL-OSDR

*Orange end strips must be specified with order
For forklift traffic use Double Ribbed PVC

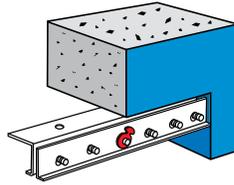

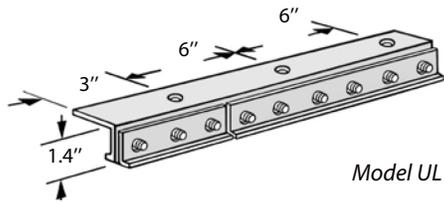

SAVE-T® Strip Door Hardware

Threaded Stud

Available in galvanized steel, stainless steel and aluminum

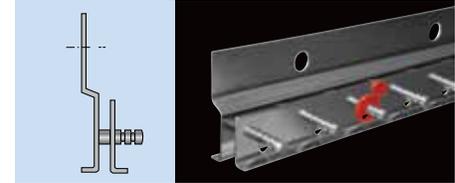

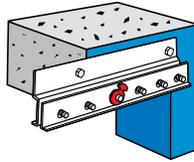

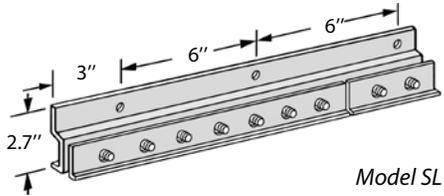

SAVE-T® LOC

Header Mount - 3', 4', 5', 6', 8' & 10' Lengths

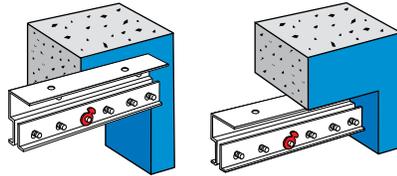

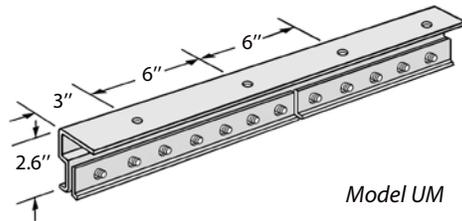

Model UL-LC

Wall Mount - 3', 4', 5', 6', 8' & 10' Lengths

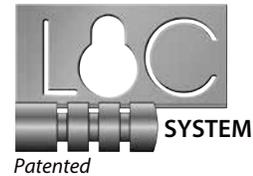

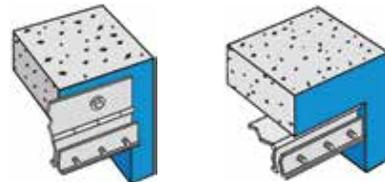

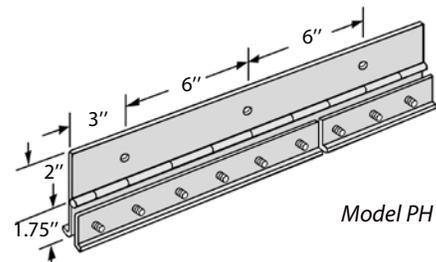

Model SL-LC

Universal Header & Wall Mount - 3', 4', 5', 6', 8' & 10' Lengths

Model UM-LC

Piano Hinge Header & Wall Mount - 3', 4', 5', 6', 8' & 10' Lengths

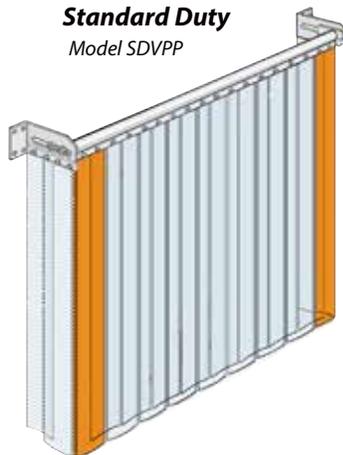

TMI's exclusive **SAVE-T®** LOC Hardware installs in minutes and strips can be replaced without tools. **SAVE-T®** LOC works with 95% of strip doors on the market.

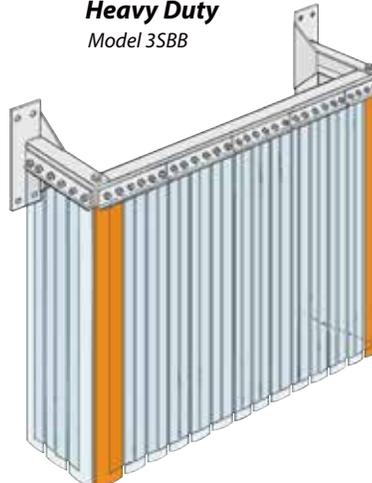

Overhead Door Brackets

Standard Duty
Model SDVPP

Heavy Duty
Model 3SBB

TMI's Standard Duty brackets can be used on doorways up to 11' wide. The strip length and projection from the wall can easily be adjusted for a perfect fit and all brackets are zinc plated for added protection.

TMI's Heavy Duty brackets provide superior strength for doorways up to 24' wide. An optional 3" brush seal to close the gap to the garage door is also available.

Quick Ship Items

RIP-A-STRIP®

Ready-to-Hang Replacement Strips

No Knife or Tools
Required!

3 Easy Steps

You can easily and quickly replace any worn strips on your pre-studded door

PULL THE STRIP

RIP THE STRIP

HANG THE STRIP

The items listed below are in stock and ready to ship the same day the order is placed.

All items below ship in specially-designed and easy-to-use dispenser box

Standard Clear Flat Strips

| Model | Dimensions | Quantity |
|-------------------|-----------------------|-----------|
| QSRIP-8X7-10-STD | 8" W x 7' L x .080" | 10 Strips |
| QSRIP-8X8-9-STD | 8" W x 8' L x .080" | 9 Strips |
| QSRIP-12X10-7-STD | 12" W x 10' L x .120" | 7 Strips |
| QSRIP-12X12-6-STD | 12" W x 12' L x .120" | 6 Strips |

Offset Double-Ribbed Clear Strips

| Model | Dimensions | Quantity |
|--------------------|-----------------------|-----------|
| QSRIP-8X7-10-OSDR | 8" W x 7' L x .080" | 10 Strips |
| QSRIP-8X8-9-OSDR | 8" W x 8' L x .080" | 9 Strips |
| QSRIP-12X10-7-OSDR | 12" W x 10' L x .120" | 7 Strips |
| QSRIP-12X12-6-OSDR | 12" W x 12' L x .120" | 6 Strips |

Complete Strip Doors: Includes Strips, Universal Mounting Hardware & Safety Orange End Strips

| Door Model | Door Size | Strip Size |

*Sound Transmission Class

The Anti-Static performance at 73°F and 40% RM charge in kilo volts is as follows:

| Initial | 15 Seconds | 30 Seconds | 45 Seconds | 60 Seconds | 120 Seconds |
|---------|------------|------------|------------|------------|-------------|
| 2.00 | 0.30 | 0.15 | .08 | .03 | .00 |

Thermal Conductivity

Thermal conductivity is the quantity of heat passing in "unit" time through a piece of "unit" area and "unit" thickness with a temperature differential of one degree between the faces. The values in this table were obtained using ASTM Test C-177.

Tensile Strength

All of TMI, LLC's flexible *SAVE-T* PVC strip and sheet products are designed and tested for both commercial and industrial applications. The materials represented in this catalog have been tested using American Standard Test Methods (ASTM).

Noise Abatement

Flexible PVC can reduce noise level from 10 db to 35 db depending on the thickness of the material. The figures in this table are the results from ASTM Test E-90 and clearly indicate the noise reduction potential of PVC material.

Ultraviolet Resistance

An ultraviolet inhibitor has been incorporated into the compound of our clear materials to reduce fading and yellowing. This inhibitor also improves the material's weatherability. Our Amber material is also formulated to deter the affects of ultraviolet and near ultraviolet light. This chart shows the correlation between a carbon arc and our Amber product.

Anti-Static

This material should be considered for "Clean Room" enclosures or high tech areas where static build-up might be a detriment.

Flame Resistance

Our flexible materials either meet or exceed the California Health and Safety Code requirements of the State Fire Marshal Code for flame retardation.

PVC Material for *SAVE-T*® Strip Doors

Standard flexible transparent strip PVC material from 4" to 16" wide and from .040" to .250" thick.

Description

- 0°F to 150°F
- Select Material Compliant with California Fire Marshal Code
- UV Stabilized

Standard-Grade PVC is recommended for applications above freezing, and as high as 150°F.

Standard flexible transparent PVC sheet material from 24" up to 60" wide and from .040" to .250" thick.

Description

- 0°F to 150°F
- Select Material Compliant with California Fire Marshal Code
- UV Stabilized

PVC Material for *SAVE-T*® Strip Doors

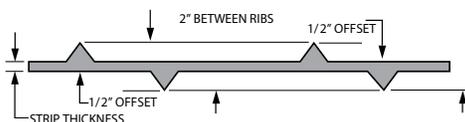

Low Temp material is made from compounds approved for indirect contact with food packaging products. This product is recommended for indoor and outdoor applications ranging from -20°F to 140°F. Extra Low Temp is available for applications to -40°F.

Low temperature PVC is recommended for use in freezers and external applications as low as -20°F.

Both sides of the strip have raised ribs spaced 2" apart and are offset by 1/2" front to back. Ribbed strips are ideal for heavy traffic strip doors because they significantly reduce scratching, so the door remains clearer and safer.

| 8" | 22-08-072-150 | .072 / .272" | 150' | 60 lbs |
| 12" | 22-12-108-150 | .110 / .310" | 150' | 124 lbs |

Insect Control Yellow

| Width | Model | Strip Thickness | Roll Length | Ship Wt. |
|-------|---------------|-----------------|-------------|----------|
| 8" | 23-08-072-150 | .072 / .272" | 150' | 41 lbs |
| 12" | 23-12-108-150 | .110 / .310" | 150' | 124 lbs |

PVC Material for *SAVE-T*® Strip Doors

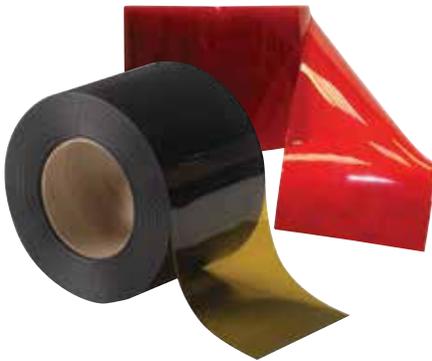

Opaque material is used to limit light transmission and visibility

Anti-Static material meets or exceeds the Federal Test Methods ST.101C and 4046 specs. The charge decay rate is 0.50 sec. with a charge potential of 5,000 volts.

Please note: Product liabilities are the sole responsibility of the end-user.

Amber and Aztec Red colored transparent PVC protects against the effects of UV light emitted during arc welding. However, eye protection should be worn for direct viewing of welding arcs even through this material.

Safety Orange PVC material designates door jambs and other areas for safety.

Opaque PVC - Strip & Sheet

0°F to 150°F

Note: Other opaque materials are available. Consult the factory

Black

| Width | Model | Strip Thickness | Roll Length | Ship Wt. |
